

Fusion Communications Wired Ware Disposal's Infrastructure with ICC Structured Cabling Solutions

Fusion Communications, Inc. is one of the fastest growing telecommunications providers in a Southern California.

A leader in environmental protection, solid waste and recycling services, Ware Disposal Co., Inc. needed to network together its two facilities in Fullerton and Santa Ana. The 25,000 square foot Fullerton location required 60 voice and data connections in two wiring closets. The 17,000 square foot Santa Ana location required 40 voice and data connections, also in two wiring closets. Both infrastructures support multi-user workstations and handle high bandwidth activity such as network servers, printers, VoIP phones, and employee time clocks.

Choosing the Right Structured Cabling System

Fusion Communications opted to install an ICC cabling system for both locations, selecting high performance CAT 5e data connectivity and premise cables. ICC 7-foot distribution racks were installed and loaded with CAT 5e data patch panels and horizontal cable management.

Fusion Communications' Systems Engineer, Frank Amato, said, "By networking Ware Disposal Co., Inc. locations with Mitel® 3300 ICPs, Mitel NetSolutions® and ICC cabling, we were able to combine voice and data network services in a much more efficient manner. This not only greatly reduced Ware Disposal Co., Inc.'s monthly phone bill, but also has increased their overall operational efficiency, resulting in enhanced customer service."

The Benefits of Offering Manufacturer Warranty

As an ICC Elite Certified Installer, Fusion was able to offer Ware Disposal Co., Inc. ICC's manufacturer warranty to guarantee the quality and performance of the network installation. Amato said, "By offering ICC's manufacturer warranty, we can set ourselves apart from our competition and offer our customers a quality product and service on every installation."
